

Dear Carol,

Thanks very much for getting back to me. The water supplier is Aqua.

It seems that there is a cancerous plume in our water system caused by Gruman/Navy facility many years ago.

I spoke with Aqua and the Navy they told me that Gruman/Navy are drilling wells to see where this plume is and to monitor when it will cause havoc to our water systems. I was also told that Gruman/Navy will be building a treatment plan.

What is concerning is when is this plume going to destroy our water system. Some believe seventeen years while others say four. I believe this drilling in our area will go on for three months.

Susanne
